

Giving NMCI Even More Deck--Extensions to the Flightline and Beyond

Wireless technologies are allowing networks to extend well beyond heretofore "normal" boundaries. This session will examine potential applications for DOD policy-compliant wireless networks as well as examine what solutions might look like in the next few years as even more exciting technologies come to market. In addition to examining applications on the flightline, we will explore applications enabling secure communication for the road warrior, improved personnel and inventory tracking, HIPAA-compliant healthcare applications, and much more. We will also examine and demonstrate threats to 802.11 infrastructure and discuss risk mitigation techniques. Attendees will come away with a better appreciation for the innovative applications possible with standards-based networks, while remaining compliant with DODD 8100.2.

Speaker:

Mike Coop

Vice President, Worldwide Field Operations

Cranite Systems, Inc.
